Art Unit: 3727

DETAILED ACTION

1. Claims 44, 45, 46, 54, and 60 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eckstein (5203390) in view of Shih (6138727), and further in view of either Chapman (1927489) or Hendren (5813080). Eckstein teaches an apparatus having an outer layer 18 of waterproof material (col. 3, ln. 5) having a top portion, a bottom portion, and a middle portion, an interior surface and an opening formed at the bottom position, an internal volume, a moisture absorbent member 30 positioned within the volume of the outer foam layer adjacent the middle portion of the interior surface. It is noted that the inner layer would have an open top end when the three edges 22, 24 and 26 are stitched together to form the cover. Eckstein meets all claimed limitations except for the material being a foam material and the hook element.

Either Chapman or Hendren teaches that it is known in the art to provide a hook element 10, 26 respectively. It would have been obvious to one of ordinary skill in the art to provide a hook element in Eckstein as taught by Chapman or Hendren to secure the device to the golf bag easily.

With respect to the material being a foam material, Shih teaches that it is known in the art to make a cover from foam material. It would have been obvious to one of ordinary skill in the art to make the outer layer from foam material in Eckstein as taught by Shih to provide the desired material for the outer layer.

Regarding claim 60, note the opening would have an elliptical shape when the closure 16 is in a relaxed state.

2. Claims 47 and 48 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Eckstein rejection, as set forth above, and further in view of Solheim (4667716). It would have

Application/Control Number: 10/086,584 Page 3

Art Unit: 3727

been obvious to one of ordinary skill in the art to make the cover from closed-cell foam material as taught by Solheim to provide an alternative material.

Regarding claim 48, it would have been obvious to one of ordinary skill in the art to provide a logo on the exterior surface as taught by Solheim, col. 2, ln 10-14, to advertise the product.

- 3. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection. In view of applicant's assertion, the drawing objection is withdrawn.
- 4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tri M. Mai whose telephone number is (571)272-4541. The examiner can normally be reached on 7:30am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Newhouse can be reached on (571)272-4544. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
